Health is a matter of trust!
A person’s most important possession

Since its founding in 1991, Sanomed GmbH has specialized in torso orthotic technology.

We specialize in use of the Chêneau brace for conservative treatment of scoliosis. Based upon the traditional construction, the brace has been repeatedly refined in order to provide the best possible treatment for our patients, most of whom are young.

The thoracolumbar corset has also been regularly improved for the patient’s well-being.

In 2007 our palette of products was expanded to include pneumatic spinal corsets for treating pain in adult patients.

THE SANOMED QUALITY GUARANTEE

Over 20 years of experience, continuous optimization of our products through the use of new technologies, brace determination by experienced personnel in conjunction with medical expertise, careful quality control before shipment.

We stand behind you with advice, treatment, sensible solutions, fast and direct customer information, and on-time shipments.
is their health

The Result is our SANO-SPINE-orthoses.

- SANO-SPINE SKOLI
- SANO-SPINE REKLI
- SANO-SPINE MOBIL

In the summer of 2010 we made a shift in our production. Since then, the fabrication of braces occurs digitally through the use of specialized software and CNC lathes. This allows for individualized treatment with the various brace types.

You too can benefit from our expertise – let us convince you.
Extraordinary demands require unique solutions

**SANOFSPINE SKOLI**
Chêneau Corset
provides three-dimensional correction for scoliosis

**SANOFSPINE REKLI**
Thoracolumbar Corset
supports reclination (upright posture)

**SANOFSPINE MOBIL**
Pneumatic Spinal Corset
provides targeted lumbar relief
Improved custom-fit

The best product is of little use if it is not correctly employed. We therefore offer instruction for proper product handling and provide problem solution recommendations.

In constant dialog with our patients, physical therapists, and physicians, we optimize the fit and function of the orthoses, because we aim to please.

If interested – please contact us.

HELPFUL DOCUMENTS TO DOWNLOAD:

Order forms as well instructions and pre-printed forms for exact measuring and for making patient photographs can be found on our website. www.sanomed.de
PRODUCT DESCRIPTION

- Polyethylene torso orthosis (4-6 mm thickness) anterior opening
- 2 Velcro closures

MEDICAL INDICATION

- Scoliosis (generally idiopathic scoliosis)

MODE OF OPERATION

- The Chêneau corset design provides three-dimensional scoliosis correction

BRACE TYPE SELECTION

Based on

- X-ray AP and/or sagittal
- Digital Photographs of Patient
- Measurement Chart

by our professional staff (in cooperation with Dr. Steffan MD, director of the Asklepios Katharina Schroth Clinic in Bad Sobernheim, medical advisory board)
Dealing specifically with the great diversity of scoliosis deformation patterns requires use of a variety of corset types.

**OBJECTIVES**

- Derotation (untwist the spine)
- Straightening of the Spine
- Restoration of Side Profile (sagittally)
- Correction of Flat Back
- Stop Scoliosis Progression
- Preclusion of Surgery
- Cosmetic Improvement

**Corset Types:**

**SANO-SPINE SKOLI 4**
4-Curve Treatment

**SANO-SPINE SKOLI 3**
3-Curve Treatment

**SANO-SPINE SKOLI KL**
Lumbar (short brace)

**SANO-SPINE SKOLI KTL**
Thoracolumbar (short brace)

**SANO-SPINE SKOLI N**
Night Treatment as per Dr. Steffan
PRODUCT DESCRIPTION

- Polyethylene torso orthosis (4-6 mm thickness) anterior opening
- 2 Velcro closures
- Either with or without aluminium reclination brace (adjustable, with leather covered pads)

MEDICAL INDICATIONS

- Scheuermann’s Disease
- Hyperlordosis
- Hyperkyphosis
- Postural Roundback

BRACE TYPE SELECTION

By customer or in consultation with our professional staff
**Corset Types:**

**SANO-SPINE REKLI O**
without reclination brace
for hyperlordosis
(Becker-Gschwendt corset)

**SANO-SPINE REKLI M**
with reclination brace
for Scheuermann’s disease, hyperlordosis, hyperkyphosis, postural roundback

**MODE OF OPERATION**
The corset affects the patient’s spinal profile by straightening in the sagittal plane.

**OBJECTIVE**
- Normalization of Lordosis and Kyphosis
PRODUCT DESCRIPTION

- Torso orthosis out of two flexible, padded brace modules
- 1 Stability rail
- 1 Fabric front with Velcro closures
- 2 Pneumatic elements
- 1 Self-regulating fill and pressure control valve

MEDICAL INDICATIONS

- Scoliosis
- Osteoporosis
- Lumbalgia
- Accident-incurred Pressure Damage
- Disc Herniations
- Osteochondrosis
- Lordosis
- Spondylosis
- Spondyloarthritis
- Static Muscular Insufficiency

COLOUR SELECTION

by customer
MODE OF OPERATION

- The corset, which exerts spinal-column-extending pressure, provides targeted relief of the affected spinal segment.
- Due to the dynamic pneumatic design, the patient is unhindered in movement.

OBJECTIVE

- Pain Relief and Easing Spinal Strain
